HOW TO GET THE MOST OUT OF YOUR AIRCRAFT RADIO

By WILLIAM P. LEAR

Aircraft radio can be readily put into three classifications:

1. Receiver
2. Transmitter
3. Intercom

RECEIVERS

There's no hurry in the reception of a radio signal made by another person. What you do depends primarily on the strength of the signal and the type of receiver you have.

Transmitter

Your transmitter should be used when you wish to communicate with another person. It should be set up in such a way as to give you the best possible results in terms of range and clarity.

Intercom

The intercom is used to play music, movies, etc., through the airplane loudspeakers. It is not used for communication with another person.

A supplement to the January, 1939, issue of Canadian Aviation
