

An Introduction to NVivo Workshop – Setup

Thank you for registering for this workshop.

Before the workshop begins, please follow the instructions below to prepare:

First set up the software

1. If you don't have NVivo 12 installed already, follow these [instructions to request a free license key and install the software](#).

Next download the datasets

1. Create a new folder on your computer to store the workshop files.
2. [Download a zip file](#) containing all the datasets you will need for the workshop to that new folder.
3. Extract the files into that new folder.

Note: Different computers have different setups. On a PC, you might first want to install a great little program called [7-Zip](#) (if you don't already have it!). Then you should be able to right click on the zip file and select 7-Zip, then Extract Here to extract its files.
